

# CAMagic PhoneLink™

## Phone Connection Solution for GPS Navigators

Hands-free calling

File transfer

Download traffic data

 Bluetooth® technology

Incoming SMS

CAMagic PhoneLink™ is an embedded modular software that cost-effectively provides the functions of a car kit to GPS Navigators. Connect the Navigator to a mobile phone using Bluetooth® technology to download the phone's contact list, photos, and music. The software also enables Internet connectivity through the phone's GPRS service, and vehicle-tracking by SMS exchange of positional coordinates.

### Phonebook

Download your phone's contact list and call register to the Navigator. Keep names, numbers, and recent calls at your fingertips on the Navigator display. You can even place a call directly from the touchscreen.

### Hands-free function

CAMagic PhoneLink provides the hands-free function for your GPS Navigator so you can make hands-free calls through your mobile phone. Accept incoming calls through the Navigator touchscreen, or use auto-answer to have the device automatically pick up the calls.

### SMS and Email

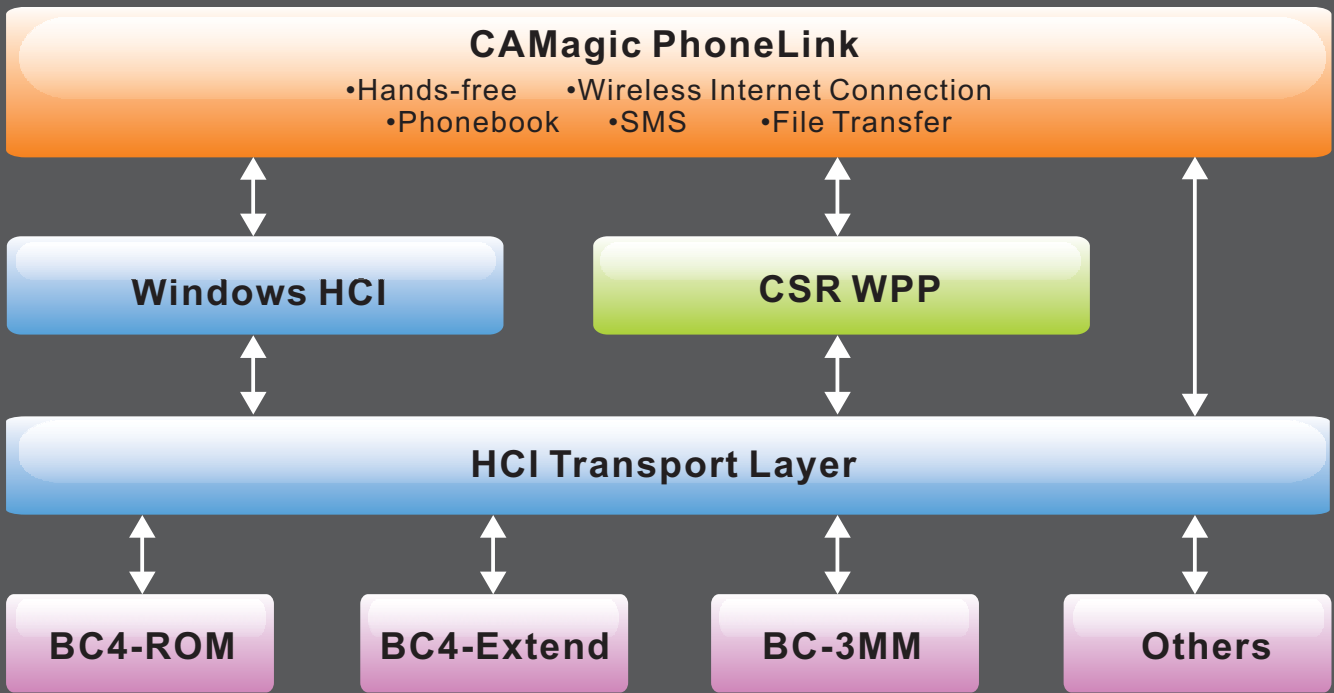

Read your latest email and SMS messages on the Navigator display, downloaded directly from your phone. Use the CAMagic PhoneLink message application and Navigator touchscreen to reply to your messages.

### Wireless Internet Connection

Use the software to connect your GPS Navigator to the Internet through your phone's GPRS/UMTC service. CAMagic PhoneLink software comes with stored profiles for 250 telecom service providers in 75 countries, so connection settings are automatic. Send email or surf the Net from your Navigator wherever you are!

### File Transfer

With CAMagic PhoneLink file transfer technology, you can download photos and MP3s from your phone to your Navigator. Enjoy a photo slideshow with the Navigator's wider screen, or listen to music on your in-car speakers.

- A&W PhoneLink
- CSR WPP
- Windows stack driver for Bluetooth® technology
- Bluetooth technology module

#### Multi-Language Support:

- English
- German
- French
- Italian
- Spanish
- Traditional Chinese
- Simplified Chinese
- Danish
- Japanese
- Norwegian
- Swedish
- Dutch
- Korean
- Russian
- Finnish
- Brazilian Portuguese
- Polish

#### ■ An Integrated Solution

CAMagic PhoneLink™ provides an easy-to-use API for integration with Navigator software, making a more powerful application for your end-users.

- Easily place a phone call to points of interest in the Navigator software.
- Track other vehicles on the Navigator screen: exchange position coordinates with friends and family by SMS messaging. The position of tracked vehicles shows on the Navigator map view.

#### ■ System Requirements:

##### GPS Navigator

Microsoft® Windows® CE .NET 5.0/6.0  
Windows stack driver for Bluetooth® technology  
7 MB storage for program installation

##### Mobile Phone

Our software offers support for more than 160 phone models with Bluetooth® technology. Contact us for the supported phones list.
